

Product Description:

Concrete Support Systems, LLC stocks cut to size water resistant Euro Thread in standard lengths. We will also cut size any non-standard lengths in our workshop. The appropriate neoprene washer is used to create a tight fitting seal surrounding the Euro Thread inner unit. This washer prevents the seepage of water along the body of the Euro Thread and is an industry standard. These washers are also available for field installation as well.

In addition, we also stock a complete line of Hyrdophillic water stop rings for use with various diameter inner units. The Hydrophillic material expands in water up to eight times it original size, thus creating a tight seal in any water mitigating application.

15 mm Neoprene Washers

Part Number: 104.015.0000

Physical Measurements

Dimensions	5/8 in / 15 mm
Weight	1.0 oz / 28.35 g

25 mm Neoprene Washers

Part Number: 104.020.0000

Physical Measurements

Diameter	7/8 in / 20 mm
Weight	1.20 oz / 56.70 g

26.5 mm Neoprene Washers

Part Number: 104.026.0000

Physical Measurements

Diameter	1 in / 26.5 mm
Weight	2 oz / 28.35 g
