Stand Alone

Thanks to its versatility and strength, our Soloform System is the premier, optimized formwork.

SoloForm is the only concrete formwork system you will ever need on the jobsite. Thanks to the revolutionary design, it's the strongest handset system available on the market today. Couple that with the 8’ x 8’ Super SoloForm panels, and the system is the ideal choice for crane set formwork assemblies.

Simple
With just a few blows of the hammer, the lightweight panel clamp connects panel joints. The clamp was designed to be fixed on any joint with one hand. The complete line of SoloForm accessories and hardware make constructing walls safe and easy. The system can be moved as ganged formwork with no additional hardware, so at any time you can cut your labor without adding additional supporting members.

Light Weight, Heavy Duty
The SoloForm System is rated for 1500 PSF of concrete pressure, making it the strongest handset system available on the market worldwide. The system is also very light, with the handset panels weighing a mere 6.75 pounds per square foot. Plus, our crane set Super SoloForm panels weigh just 8.75 pounds per square foot. The 8’ x 8’ Super SoloForm panel requires only four ties and is rated at 1500 PSF. It’s one lightweight system with complete modular versatility and superior strength.

For more information contact us at info@soloform.com or 239.330.7614
Soloform is manufactured in the United States. We produce the system from 50ksi steel and control the process from raw materials to finished goods. Our factory is the only one in the country that roll forms the various profiles used to fabricate the formwork panels. Our formwork panels are welded in state of the art automatic fixtures, using the best robotic technology available today. Our welds are 100% inspected before the formwork panel is moved through our in house galvanizing operation.

Made In America

Concrete Support Systems is owned and operated by the very best designers and developers of concrete formwork, shoring and accessory systems worldwide. Our team has dedicated their professional lives to the concrete construction industry, and the result is a complete set of cutting-edge products. Concrete formwork and shoring is all we do, and we do it well.

Concrete Thinking

100% Dedicated to the Concrete Industry

Concrete is manufactured in the United States. We produce the system from 50ksi steel and control the process from raw materials to finished goods. Our factory is the only one in the country that roll forms the various profiles used to fabricate the formwork panels. Our formwork panels are welded in state of the art automatic fixtures, using the best robotic technology available today. Our welds are 100% inspected before the formwork panel is moved through our in house galvanizing operation.

Each formwork panel or component is hot dipped galvanized to ensure a long service life. The next stop in the factory is the carpentry shop, where a state of the art CNC line cuts and routes each nine ply birch formwork panel to the exact size. The automated line then uses a vacuum jib crane to place the panel into the welded frame, thus completing the assembly line process.

Features & Benefits

30” Standard Panel
- 50 KSI steel side rail profile
- 50 KSI steel cross member profile
- Cast corner block with pry bar recess
- Climbing rods
- Open tie box design
- Hot dipped galvanized

36” Multi-Purpose Panel
- 50 KSI steel side rail profile
- 50 KSI steel cross member profile
- Cast corner block with pry bar recess
- Climbing rods
- Open tie box design
- Bulk head applications
- Pilaster applications
- Column applications
- Hot dipped galvanized

8’ x 8’ Super Panel
- 50 KSI steel side rail profile
- 50 KSI steel cross member profile
- Cast Corner block with pry bar recess
- Climbing rods
- Conical tie box
- Hot dipped galvanized
- 1500 PSF
Connections Made Easy

Standard Clamp | Adjustable Clamp | Hammer Head Bolt
Hammer Strike Setup
SoloForm is simple to assemble, designed to be fixed on any panel joint with one hand.

Easy Up
SoloForm is designed in feet and inches, with no top or bottom. This means set up is a breeze.

Multi-Faceted Accessories
SoloForm accessories are built to achieve multiple functions with the same piece.

Easy To Climb
Because SoloForm is manufactured with climbing rods and is designed with consistent cross member orientation, the system is safe and easy to navigate.

Perfect Fit
SoloForm is available in 20 different panel sizes.

Widths: 8’, 4’, 36”, 30”, 24”, 18”, 12” and 8”

Heights: 8’, 6’ and 4’
90° Corners

Outside Corner

Inside Corner
Hinge Corners

Inside Hinge Corner

Outside Hinge Corner
The Ideal Accomplice

- Footing Clip
- Job Built Filler
- Multi Claw
- Top Tie Bracket
- Swivel Tie Plate
- Stacking Waler as Strongback
- Stacking Waler as Bulkhead
- Tomahawk Bolt
- Hammer Head Bolt
Going Up

Safety First

Climbing anywhere from 10 to 150-feet up, safety makes or breaks every part of this job.

SoloForm has been built with integral climbing rods. Each location is a tie off point that exceeds the industry standards. The cross member orientation is consistent and at 4” deep the panel provides an excellent foot hold.

Get Hooked

SoloForm is the best clamp system available today. With only one system you can handset or crane set your project while achieving optimal production rates and unrivaled safety.

Walk Proudly

SoloForm is made in the USA! Proudly use a product that provides jobs here in the United States.

Rest Assured

SoloForm won’t rust. Many, many years from now, it will be still be the only form you need!
